Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C;Accession: T15414
R;Getsel, C.
submitted to the EMBL Data Library, April 1996
A;Bescription: The sequence of C. elegans cosmid C05E11.
A;Reference number: Z18347
A;Accession: T15414
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule rype: DNA

C; Comment: This protein, a member of a family of heat-stable peptides, is a potent extra axis. This peptide signalling system plays a role in osmoregulation in euryhaline telec C; Superfamily: guanylin
C; Keywords: heat-stable protein; osmoregulation
F; 1-28 Domain: signal sequence #status predicted <SIG>F; 29-116 / Product: guanylin precursor, long form #status predicted <MAT>
F; 133-39/Region: homologous #status predicted
F; 69-114/Region: highly conserved #status predicted

Neat-stable enterotoxin ST-Ib precursor - Escherichia coli

Neat-stable enterotoxin ST-Ib precursor - Escherichia coli

NyAlternate names: heat-stable enterotoxin ST-A2

C;Species: Escherichia coli

C;Species: Bacherichia coli

C;Date: 30-Jun-1991 #sequence revision 30-Jun-1991 #text_change 09-Jul-2004

C;Accession: 30-Jun-1991 #sequence revision 30-Jun-1991 #text_change 09-Jul-2004

C;Accession: 39, 1167-1174, 1983

N;Title: Isolation and nucleotide determination of a gene encoding a heat-stable enterot

A;Residues: 1.72 cMOS

A;Accession: 39, 1057-1174, 1983

A;Residues: 1.72 cMOS

RESULT 15 S18783

```
NAtternate names: scarlet fever toxin
Cispecies: Streptococcus pyogenes phage
A;Variety: strain MGASISS isolate Nebraska; strain MGASISS isolate Yugoslavia; strain MGZICSPacies: 29-dan-1993 #sequence revision 29-dan-1993 #text_change 16-dul-1999
C;Accession: S18783; S18793; S18794; S18801; S18798
MSHSION: K, SCAILEVERT, P.M.; Selander, R.K.; Musser, J.M.
J. Exp. Med. 174, 1271-1274, 1991
A;Title: Characterization and clonal distribution of four alleles of the speA gene encodality.
- Streptococcus pyogenes phage (strain MGAS158 isola
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A; Molecule type: DNA

WA Sanford L.P., Cohen M.B.;
Sanford L.P., Cohen M.B.;
Submitted (FEB-2000) to the EMBL/GenBank/DDBJ databases.

Stimulates this enzyme through the same receptor binding region as stimulates this enzyme through the same receptor binding region as the heat-stable enterotoxins. May be a potent physiological the heat-stable enterotoxins. May be a potent physiological regulator of intestinal fluid and electrolyte transport. May be an cortansport (By similarity).

C. autocrine/paracrine regulator of intestinal salt and water transport (By similarity).

C. -- SUBCELLULAR LOCATION: Secreted.

C. -- TISSUE SPECIFICITY: Localized predominantly in intestinal villical and the corticomedulary junction of the kidney.

C. -- SIMILARITY: Belongs to the guanylin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright. -!- FUNCTION: Endogenous activator of intestinal guanylate cyclase. It stimulates this enzyme through the same receptor binding region as the heat-stable enterotoxins. May be a potent physiological regulator of intestinal fluid and electrolyte transport. May be an autocrine/paracrine regulator of intestinal salt and water
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           STRUCTURE BY NWR OF 97-112.

Submitted (MAY-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Endogenous activator of intestinal guanylate cyclase. It stimulates this enzyme through the same receptor binding region as the heat-stable entercoroxins. May be a potent physiological regulator of intestinal fluid and electrolyte transport. May be an autocrine/paracrine regulator of intestinal fluid and electrolyte transport.
                                                                                                                                                                                                                                                                                                                                                                                   9 AVLLLLVLQSAQGVYIKYHGFQVQLESVKKLNELEEKQMSDPQQQKSGLLPDVCYNPALP

Uroguanylin: structure and activity of a second endogenous peptide that stimulates intestinal guanylate cyclase.";

Proc. Natl. Acad. Sci. U.S.A. 90:10464-10468(1993).

-!- FUNCTION: Endogenous activator of intestinal guanylate cyclase. stimulates this enzyme through the same receptor binding region at the heat-stable enterotoxins. May be a potent physiological regulator of intestinal fluid and electrolyte transport. May be autocrine/paracrine regulator of intestinal salt and water
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Fan X., Hamra F.K., Freeman R.H., Eber S.L., Krause W.J., Lim R.W., Pace V.M., Currie M.G., Forte L.R., "Uroguanylin: cloning of preprouroguanylin cDNA, mRNA expression in the intestine and heart and isolation of uroguanylin and

Both uroguanylin and prouroguanylin are found
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   peptides.";
Biochem. Biophys. Res. Commun. 259:141-148(1999).
-!- FUNCTION: Endogenous activator of intestinal guanylate cyclase. It stimulates this enzyme through the same receptor binding region as the heat-stable enterotoxins.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the guanylin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9 AVLLLLVLQSAQGVYIKYHGFQVQLESVKKINELEEKQMSDPQQQKSGLLPDV-CYNPAL
